Problem Statement #18: Clinical Trial Subject Recruitment Engine

Use-Case Flow Document

Use Case: UC-03 Check Eligibility

Primary Actor: Clinical Researcher

Secondary Actor: Trial Candidate

Preconditions:

1. The Trial Candidate has registered an account (UC-01) and submitted the pre-screening survey (UC-02).

2. At least one active trial protocol with inclusion and exclusion criteria exists in the system.

3. The Clinical Researcher is logged in and has access to the eligibility rule engine.

Postconditions:

1. The candidate is classified as eligible or ineligible for the selected trial.

2. The result and the matched or failed criteria are stored in the candidate record.

Main Success Scenario:

1. Clinical Researcher opens the candidate list and selects a candidate to review.

2. System displays the submitted pre-screening survey for that candidate.

3. Researcher selects the trial protocol to check the candidate against.

4. Researcher clicks the "Check Eligibility" action.

5. System runs the eligibility rule engine on the survey responses against the trial inclusion and exclusion criteria.

6. Rule engine returns an eligible result with the list of matched inclusion criteria.

7. System stores the eligibility result with a timestamp in the candidate record.

8. System displays the eligibility outcome and enables the "Move to Consent" button.

9. Use case ends successfully.

Alternate Flow 6a: Candidate is Ineligible

6a1. Rule engine finds that one or more exclusion criteria match the candidate.

6a2. System marks the candidate as ineligible and stores the list of failed criteria.

6a3. System displays the ineligible status with the failed criteria.

6a4. UC-08 Suggest Alternate Trials is invoked to list other open trials that may match.

6a5. Use case ends.
